

Line Throwing gun Of ZHPT:

ZHPTQ multifunction pneumatic of dumped device which formed by the transmitter, micro-gas cylinders and inflatable life buoy inflatable life ring formed by the shell, TPU air chamber, automatic inflation devices and co2 gas storage bottle before use, in the Launcher barrel of dumped into the life buoy, the life buoy composed of pieces from the air chamber are connected together and wrapped in the enclosure, left the water hole in the one end of shell meanwhile the other end connected rope, else with the 120 meters throwing, it can be connected very quickly with the life buoy, prepared the above- mentioned work, the knob on the dumped device turn to the insureds insurance status, and then dumped with CO2 storage cylinders to filled compressed gas inside, so dumped in the outgoing state transmitter.

When rescued from the river need of assistance, the dumped transmitter at the front of the goal, turning the handle to blow needle cylinder wear, while gas will be released to the indoor of air dumped device Then pull the trigger, the dumped can casted the life buoy launcher to the with air chamber, because the gas pressure, to chamber components and shell separation meanwhile autor can be saved by catching the inflated life buoy which keeps te drowning floating above the water, play a life-saving role finally.
